

Choosing the right biocide is important.

Solving bacteria and fungus problems in fuel is serious business. It's important to make the **right choice**. Here's what you need to know.

BIOCIDES		BELLICIDE	BIOBOR JF (Diborinane)
	Contact time to a complete kill (how long does it take to work?)		
	Effectiveness after 1 week (is it still working after one week?)		
	Effectiveness after 4 weeks (is it still working after four weeks?)		
	Sensitivity to pH (do microbial acids in the fuel keep it from working?)		

= Best Choice

= Acceptable Choice
