

Bellicide vs. Kathon FP 1.5

Solving bacteria and fungus problems in fuel is serious business.
It's important to make the **right choice**. Here's what you need to know.

BIOCIDAL TREATMENT		BELLCIDE	ISOTHIAZALONE (i.e. Kathon FP 1.5)
	Contact time to a complete kill (how long does it take to work?)		
	Effectiveness after 1 week (is it still working after one week?)		
	Effectiveness after 4 weeks (is it still working after four weeks?)		
	Sensitivity to pH (do microbial acids in the fuel keep it from working?)		

= Best Choice

= Acceptable Choice
