

MARINE MXO

COMMERCIAL-GRADE MARINE FUEL TREATMENT FOR GASOLINE AND ETHANOL BLENDS

ETHANOL BLENDS FOR MARINE USE: THE GOOD & THE BAD

Gasoline blended with ethanol is great for the environment because of its low emissions. But its inherent problems have marine users around the country searching for solutions.

Ethanol blends give lower fuel economy than regular gasoline, making them more expensive for boaters. Ethanol strongly attracts water from the marine environment, leading to phase separation as the ethanol mixes with the water, separates from the gasoline and sinks to the bottom of the fuel tank. Ethanol is also an aggressive solvent that softens and damages critical rubber, plastic and fiberglass parts in the fuel system, leading to costly repairs.

All of these ethanol fuel problems together lead to potentially issues for boat owners:

- Poor fuel economy
- Loss of octane and destruction of fuel quality from phase separation
- Rust and corrosion in the fuel system and fuel storage tanks
- Loss of performance, hard starting and rough running

Ethanol users face not only these problems, but also the build-up of deposits in injectors and other critical areas from the dissolved rubber and plastic materials that the ethanol fuel has dissolved from other parts of the fuel system. These deposits wreck the efficiency and performance of the marine craft.

MARINE MXO IS THE SOLUTION

MARINE MXO marine fuel treatment for gasoline and ethanol provides commercial-grade treatment to improve marine fuel quality and performance while solving the fuel-related problems most commonly seen in marine applications.

COMMERCIAL GRADE BENEFITS OF MARINE MXO

- Improves fuel combustion and power for better fuel economy and performance
- Protects critical parts from ethanol damage
- Disperses water build-up to protect fuel quality
- Stabilizes ethanol fuel
- Cleans and removes gums and deposits from injectors, fuel systems and combustion chambers
- Lubricates injectors and top cylinder areas

CONCENTRATED FORMULA

One (1) ounce of **MARINE MXO** treats eight (8) ounces of fuel (1 gallon treats 1,000 gallons of fuel).

Always add **MARINE MXO** to the fuel tank prior to the addition of new fuel to ensure optimal mixing of fuel and additive.

AVAILABILITY

MARINE MXO is available in a variety of product sizes to suit the needs of marine fuel users: 16 oz, 32 oz, 1 gallon, 5 gallons and 55 gallons.

Contact Bell Performance for product availability for bulk fuel treatment.
