

BELL INJECTOR CLEANER

POWERFUL ONE-DOSE INJECTOR/CARBURETOR CLEANING FOR GASOLINE AND DIESEL ENGINES - YOUNG AND OLD

Today's modern fuel-injected engines are more sensitive to deposit build-up, particularly in the fuel metering and intake systems. **BELL INJECTOR CLEANER** brings superior cleaning power to keep your state-of-the-art engine running like new.

WHY USE BELL INJECTOR CLEANER?

Deposit buildup in fuel metering and combustion areas is the biggest fuel/vehicle-related reasons why vehicle performance drops as the vehicle accumulates mileage. Injector deposits are a major culprit — these deposits cause poor mileage, performance and higher emissions by changing the fuel spray away from a fine mist, reducing the efficiency of the fuel burn.

Older vehicles can be affected by deposits in the carburetor area. These deposits affect the vehicle's

ability to maintain the correct fuel/air ratio, hurting fuel economy and performance.

Diesel engines are particularly prone to built-up deposits, as diesel fuel lacks any requirement for deposit control ingredients in the fuel.

BELL INJECTOR CLEANER cleans gum, varnish, carbon and other deposits from the vehicle's entire fuel system.

- Cleans clogged injectors and dirty carburetors
- Removes carbon from all parts of the fuel system and combustion areas
- Improves engine efficiency and performance

BELL INJECTOR CLEANER can be used in any gasoline and diesel engine and will not harm computers, catalytic converters or oxygen sensors.

BELL INJECTOR CLEANER has no effect upon diesel emissions control equipment including particulate traps and diesel exhaust fluid systems.

Directions: Add 8 oz. **BELL INJECTOR CLEANER** to a full tank of fuel (10-20 gallons). Drive vehicle as normal. **BELL INJECTOR CLEANER** is formulated to remove most deposits within one tank of fuel.

After cleaning, keep the fuel system (and your vehicle) in peak condition by using **MIX-I-GO** or **DEE-ZOL** at every fill-up.

Because Performance Counts
