

DFS PLUS

COMMERCIAL GRADE WATER-CONTROLLING FUEL SUPPLEMENT WITH SURFACTANT

BENEFITS:

- **Absorbs and controls water in all types of petroleum fuel.**
- **Reduces possibility of ice formation in cold weather.**

Controlling free water in fuel tanks is a key step to preventing many kinds of fuel-related problems, whether it's protecting fuel injectors from damage or reducing the likelihood of microbial growth in fuel.

Water accumulates in petroleum fuels through many avenues – atmospheric condensation in storage tanks, hot fuel returns in engines, even water absorption by ethanol fuels.

DFS PLUS with surfactant is highly concentrated to control water in all types of fuel by absorbing water into the fuel so that it can be combusted.

DFS PLUS can be used with any type of petroleum fuel - #1 and #2 diesel, gasoline, ethanol-blends, biodiesel blends and home heating oil.

RECOMMENDED TREAT RATIO:

8 oz. **DFS PLUS** treats 240 gallons of diesel and other types of fuel. 1 gallon treats 3,840 gallons of fuel.

Always add the product to the fuel tank prior to filling to assure good mixing.

Fuel recirculation in bulk fuel storage tanks is recommended for best mixing and highest effectiveness.

We Made It First. We Make It Best.
